

The Libra Solutions SIP Ring Detector connects to an IP PBX and registers as a SIP Client, pretending to be a simple SIP telephone.

By programming the PABX to call this device in parallel with the Engine Control Room phone, its internal relay will operate, and can be used to activate Strobes and/or Sirens in high noise areas to alert those working in these areas to incoming phone calls

Specifications

- Interfaces to PABX as single line SIP telephone
- Qualified with Cisco, Panasonic and Siemens systems (see note)
- SPCO relay output
- 30V DC 2A
- Ethernet / PoE
- Web configuration page

Note: Please enquire if you have a different PABX vendor.
