

## Give your guests Airplay – but specify the receivers that each can access.

AirPlay is a great facility for your guests, but on a large vessel it can be confusing to see a choice of sometimes dozens of Airplay receivers. One guest accidentally playing their music or home movies in another's cabin could be embarrassing.

Our product gives complete control over the Airplay receivers to which each guest can broadcast. All the others are hidden from view, so that the user just sees those to which they have access when they tap the Airplay icon on their mobile device.

### Specifications

- Works with all typical yacht networks using VLANs
- Supplied as a hardware appliance
- Licencing options for 10, 25, 50 or 100 receivers.
- Up to 250 registered senders
- Larger installations available on request

Typically, when a guest comes on board, he or she will just hand their smartphone or tablet to the crew member welcoming them. That person then uses an extremely simple process to register the device with AirPlay Manager, then logs into our exceptionally intuitive management interface to select one or more of the areas that are available to the guest.

### Administrator Benefits

- Gives precise control over which receivers are available to specific users
- Simple user interface available on PC or tablet
- Simple to remove a device once a guest has left the vessel
- Password protected to prevent unauthorised access to the configuration

### User Benefits

- Simplified list of receivers below the Airplay symbol
- Exclusive use of specific receivers if required
- Access can be granted to single or multiple areas
